

## What is a multi-surface primer?

A creamy undercoat that transforms any surface (primed canvas, plastic, wood, glass, metal) into one with a subtle texture similar to watercolor paper. Specially formulated to offer an ideal level of absorption.

### Features :

- **Superior Colour Retention:** W&N Multi-Surface Preparation holds colour intensity, offering the best balance between absorbency and vibrancy. This is especially relevant for watercolour artists who want richer, truer colour
- **Even and Reliable Drying;** W&N Multi-Surface Preparation provides a perfectly uniform dried surface with no patchiness
- **Balanced Absorbency:** Doesn't over-absorb, allowing better control of paint flow and saturation while preventing colours from looking dull
- **Consistent Results Across Surfaces:** On both wood and canvas, W&N Multi-Surface Preparation performs well with no adhesion issues and reliable handling qualities
- **Ready-to-Use Texture:** The thicker, creamier white formulation provides a good working surface without excessive texture or unevenness

Available in 250ml in 2 colors:  
white and transparent
